Summary

Full-stack engineer who built an AI-native AP and AR platform for 10 paying customers, after 4 years at Expedia.

Skills

Languages	**TypeScript**, **Java**, JavaScript, Python, Go, Kotlin, SQL
Frontend	**React**, **React Router v7** (*SSR*), Zustand / MobX, design systems, Server-Sent Events
Backend & APIs	**Node.js**, **REST**, GraphQL, gRPC, OpenAPI, webhooks, BFF pattern, OAuth 2.0 / OIDC, SAML
AI & agents	**Document extraction**, **email agents**, human-in-the-loop review, design-drift checks, Claude Code
Integrations	**Gmail API**, **SendGrid**, Moov, Change Data Capture
Messaging & data	**Google Cloud Pub/Sub**, **SQS/SNS**, Kafka, Kinesis, PostgreSQL, DynamoDB, Redis, Elasticsearch
Cloud & delivery	**AWS** (*ECS, Lambda, S3, IAM, CloudFormation*), **Kubernetes**, Docker, GitHub Actions, Datadog
Client work	**Client onboarding**, **workflow discovery**, runbooks, integration tests

Experience

Founding Full-Stack Engineer, *AI-native AP & AR platform* — Apr 2026 - Oct 2026
OpenCFO — Seattle, WA, USA

- **Web app ownership:** Owned the web app of an AI-native AP and AR platform from **0 to 10 customers**: 287 merged PRs, 136 routes and a test suite grown from 0 to 3,200 tests.
- **AI document review:** Built the UI for AI-extracted invoices, POs and receipts: **10 extracted fields** highlighted on the source PDF, background processing for uploads, and an exception-first view for quick review.
- **AI email agent:** Built an agent that classifies vendor emails, reads attachments, routes invoices into bill capture and drafts replies for review. It runs on durable SQS jobs with execution leases, evals and model-cost tracking.
- **BFF layer:** Proposed a BFF (*Backend for Frontend*) layer for our React Router v7 app and built it in one week. It now serves **87 endpoints** that join data from several APIs.
- **Three-way match:** Built an auto-match API that joins line items in web workers, from **1,087ms to 738ms**. DOM virtualization and Chrome profiling keep the match screen fast at ~16K line items.

Software Engineer II, *Partner Experiences & Identity* — May 2022 - Apr 2026
Expedia Group — Seattle, WA, USA

- **Update Email:** Led the project over 2 quarters: built it in TypeScript, React and MobX, wired the downstream team to the APIs, and reached **85% adoption** across ~100K partners through 4 Expedia Group partner portals.
- **Identity sync:** Deployed a Change Data Capture pipeline with the downstream team to fix legacy-portal sync and lockouts; with identity sync it resolved **~45% of email lockout support tickets**.
- **Backend services:** Built Kotlin and Java services with GraphQL and REST APIs, plus gRPC APIs on a Zanzibar-style permission model with contract tests for downstream teams.
- **On-call:** Carried L3 on-call across time zones for ~6 P1 services and was SME for 4 more; request tracing, SRE alerts and RCAs cut support requests **~20%**.
- **Deployments:** Shipped through Spinnaker to an internal Kubernetes cluster with Istio sidecars; feature flags and progressive rollout cut deployment incidents **~25%**.

Software Development Engineer, *Connected Vehicle Platform (CVP)* — Jun 2021 - Apr 2022
Global Traffic Technologies — Minneapolis, MN, USA

- Built AWS Lambda and API Gateway services, ElastiCache caching and CloudFormation stacks.

Education

Master of Science in Computer Engineering	New York University, New York, NY, USA	May 2021
Bachelor of Science in Computer and Information Science	University of Mumbai, Mumbai, India	Jul 2019

Projects

Invoice PDF Field Highlighter *(React 19, pdf.js, TypeScript)*: Maps 10 extracted invoice fields to on-screen PDF highlights; now live in the OpenCFO bill viewer.
PAWS Email Notifications *(TypeScript, AWS Lambda, EventBridge, PostgreSQL)*: Scheduled Lambda jobs match adopters to shelter animals and email them when one arrives.
Learning library *(Claude Code skill, TypeScript)*: Turns real code into 30 interactive docs with quizzes.
